**Test Comments:** *Although emergence looked good in both tests, at harvest, you could see a big difference in the early-season vs. full-season plants. The early test had short plants, little foliage remaining and tops broke off with nubbin ears. The full-season had taller plants, larger ears, deeper kernels and full of foliage. Both tests were well pollinated. No major leaf diseases. Strong cobs made shelling easy.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
