**Test Comments:** *Within hours after planting, the site received a 4" rain, followed by several more rains totalling 10-12". Both Matt and I were surprised that plants emerged this well. The early-season test had much better stand than the full-season test. Hybrids with lower stands had ear length flex to still yield well. Full-season test was rejected because yield differences were due to final population, not genetics.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
