Test Comments: *This was a nice uniform plot. Final stand, plant health and standability were good. The early portion of the growing season was favorable and that showed in nice ear development, girth and length. Kernel counts were good with most ears filled to the tip. Unfortunately, like most of the Thumb area, rain in August and September was very limited and capped yields via kernel weight.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
