**Test Comments:** *This plot was in great shape during the last week of June. The soil started to dry out soon after and July rainfall was limited. A wind storm in July brought 70 mph winds along with hail that caused crop damage. At harvest, goosenecked and lodged corn was widespread throughout the tests. Yields were affected by the damage and resulted in variable yields across replications of the same product.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
