**TEST COMMENTS:** Emergence was good at this location, and the early season growing conditions were favorable. Brad, our host grower, commented that, "Very little rainfall in August and September really hurt the yield potential". Beans in the surrounding area were yielding 50-55 bu. Plants were short and standing perfect, making harvest easy. There was very little evidence of any disease present at harvest time.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
