Test Comments: *Ten days before harvest, this plot looked great except for one heavily diseased hybrid. At harvest, some hybrids were flat on the ground with roots exposed. A moderate storm with 3" of rain toppled these poorly rooted plants. The wet growing season limited root growth making plants vulnerable to root lodging. Plants had disease from bottom to top. Most non-flat corn went through the combine.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
