Test Comments: *Excellent emergence and early development. Corn looked great until late June and July. High temperatures in the 100's during mid-July and lack of rain caused severe stress that made many hybrids barren. Rains came in August and September but only seemed to aid disease pressure. Stalk quality was very poor with diploia and gibberella stalk rots present. Overall test rating is 8 out of 10 (10=best).*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
