**Test Comments:** *This plot was early planted under ideal conditions and had uniform emergence. Good moisture and lots of heat this summer had the corn crop growing fast and pollinating early. Corn plants were standing great with excellent stalk strength and very little kernel disease at harvest. Some northern corn leaf blight was present. This disease really came on late fueled by the August rains received.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
