Test Comments: This site has very uniform soil and good drainage throughout. Plots went in good and had good plant emergence and uniformity. Plants were not overly tall during the growing season. At harvest stalks were dry and free of fodder. Lodging was not bad but ear drop was a major issue with certain products. Strong sustained mid October winds jarred stalks hard and long enough to cause ears to fall.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
