Test Comments: Three reasons for the low yield performance in this plot. 1. late planting due to a wet spring. 2. Hot and dry weather in mid-June when corn was 12 to 18 inches tall which impacted ear development. 3. Lack of nitrogen due in part to the excessive amount of rainfall received at this site. Overall rating of the plot is 6 out of 10. (10=best)

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
