Test Comments: *V4 stage plants from this mid-May seeded corn struggled in the second half of June. The plot and surrounding field looked like it could use a boost. Perhaps the dry conditions limited nutrient uptake. At harvest, stalk health and weed control were good. The yield level was pleasing considering the slow start. Tim, our plot host, had not experienced this before and plans prevent it in the future.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
