TEST COMMENTS:

A lot of corn was planted mid May due to soggy and cool soils that were slow to dry this spring. Another 5" fell by June 1, within 2 weeks of planting. The real story for this site were 3 untimely wind events. A June 30 storm brought 60+ mph gusts that damaged plants during ear formation. A July 20 storm also packed high winds during pollination. Finally, a third storm on Aug 5 brought another round of wind that green-snapped several hybrids to different degrees of severity.
