### TEST COMMENTS:

*This plot was planted the same day as the surrounding field. Rainfall was sparse – season totals ended at half of what is typically received. Drought set in early, and then June work revealed plants under severe drought stress (June caught 1.3" when 6" is typical). Rain did pick up in July and August, yet it was still below average. Considering the tremendous stress this trial was put through, it was good to see a trial still intact at harvest. There was no weed pressure. Plants had shorter stature. Some slight soil differences were magnified due to the D3 -extreme drought this area still finds itself in at harvest.*
