identifies the check hybrid entered in both early- and full-season tests to assist in comparing the results.

* indicates seed tested from lots not commercially available at planting. Hybrids in italics exceed the grain moisture limit for this test.

FIELD NOTES: *This area had a very, very wet spring. The plot emerged fairly well for the conditions and developed alright in spite of continued weather extremes, mainly too much rain. The minor amount of lodging was all stalk lodging. This plot yielded well for what it endured during the season and the data turned out pretty well too.*
