→ identifies the check hybrid entered in both early- and full-season tests to assist in comparing the results.

\* indicates seed tested from lots not commercially available at planting. Hybrids in italics exceed the grain moisture limit for this test.

**FIELD NOTES:** Location showed all signs of stress from the heat and dry weather as the plant height was from four to six feet tall. Plot average was well above expectations for this type of growing season. Stalk quality was poor as the plant put all it's energy in the ear.
