identifies the check hybrid entered in both early- and full-season tests to assist in comparing the results.

\* indicates seed tested from lots not commercially available at planting. Hybrids in italics exceed the grain moisture limit for this test.

**FIELD NOTES:** This location got off to a great start, we had good stands and great moisture. Then mother nature decided to turn the faucet off and in the month of July only 3/10th's of rain, Aug - 20 plus inches. All hybrids had great root structures and most had green stalks on the bottom half. Ear development during pollination and fill was terrible to say the least.
