Test Comments: *Seasonal conditions were ideal for later maturing hybrids here. Ideal weather following planting provided for excellent stands and good plant establishment. Seasonal rainfall was spread out pretty well with a couple slightly dry periods, one just before tassel and again from blister to dough stages. Growing season rainfall totals were about 5.8" above the 30-yr average for this area.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
