Test Comments: *Matt said that his farm received 17.6" of total rainfall from July 28th - November 3rd. Considering the wet spring, seedling emergence was very good. Disease pressure was moderately high, which affected standability. Lodging reflects greensnap, stalk rot and root rot. Ear development suffered from too much rain and disease. Many ears were only 4-5" long with small seeds and poor quality.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
