Test Comments: *This was one of our later planted sites due to persistent spring rainfall. Overall, the tests were pretty good with a nice range of grain moisture and uniform yield. Some hybrid specific lodging was noticed. Plants were very tall with high ear placement. The full season hybrids still retained fodder. Grain quality was good with little sign of disease. Corn around plot averaged around 210 bu/ac.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
