Test Comments: *The plot was good overall. A cold wet period after planting contributed to slow corn maturation in portions of the test. Stalks were still healthy at harvest with very little lodging. Diplodia was present in grain samples (5-7% damage). All full-season hybrids had lost all green but ears remained upright, but not so for early hybrid ears. The field around the plot averaged 215 bu/acre at 20% moisture.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
