TEST COMMENTS: 7.25" of rain fell in town but not out here in the field. Every shower that came through seemed to miss this location receiving tenths here and there. When the field matured it went fast. Once again ear smut was seen throughout the plots. Plant height varied from plot to plot. Hybrids that produced decent ears had very weak shanks as the ears would fall off going through the chopper head. Samples analyzed by Dairyland Laboratories, Inc.

COMMENTS: *Notice how dry this field looks. The dead leaves would make you think the silage moistures would be low. Who would have guessed this field would average 65% moisture. The stalks were holding tons of moisture in them. This has been seen in multiple fields this year.*
