TEST COMMENTS: *Ear development was very good for the area this season. Ear shanks were weak and ears dropped off as they came into the head. Plant health was excellent with some ear smut seen. Height was medium to medium tall for the majority of the field. Late rains helped elevate plant moisture. In July, it looked like this field could have been a failure. The few light showers it received pushed it through. Although the height was inferior to 2011, there was good tonnage produced from grain. Samples analyzed by Dairyland Labs.*
