Test Comments: *Wet spring conditions delayed planting. The growing season after planting was slightly warmer than average. At harvest, cobs were filled to the tip with kernels with very little lodging Jeff said that the field around the plot was pushing 200 BPA. Harvest in this area has been slow due to persistent snowy weather, corn plants retaining snow, thus plugging combine sieves with slush and ice.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
