TEST COMMENTS:

The cool, wet spring delayed planting and plant development. High winds on July 20th caused some green snap and some serious stalk lodging. Plot yields were more variable here this year, as they have been at almost every FIRST corn site in southern MN. Harvest was delayed by a wet October and snow on Nov 5th. Some plots, particularly in the Full-Season Test, had nearly 100% lodging/green snap. Many corn acres have yet to be harvested in SW Minnesota.
