TEST COMMENTS:

Favorable weather allowed for planting in late April, when many fields in the area were planted. Moisture was adequate from planting through much of July. The last half of the growing season was pretty dry, but where soils retained moisture, yields were huge. Unforeseen soil differences within the plot caused more variability among yields than we typically see, thus 1 replicate was dropped in the early-season test. In all, seasonal rainfall totals from 5/1 to 9/15 ended at about 3.6" below the 30-yr average.
