TEST COMMENTS:

Planting conditions were excellent this season and progressed quickly. Most corn in this area was in the ground by the end of April and showed great early season vigor by the end of May. Though much of NW Iowa was very dry during the last half of the growing season, this Sioux county site was able to catch a few passing rains at the end of July. The Galva silty clay loam held water well enough through the August dry spell to fill kernels to the tip. GDU's accumulated quickly in August while freezing conditions held off into October which generally favored the later maturities, as evidenced by the test averages. Big thanks to our plot host, Chris, for providing a great trial site with nice consistency and overall uniformity.
