### TEST COMMENTS:

Planted into a green wheat cover crop with adequate soil moisture, which gave an excellent uniform stand and emergence. Crop started well but had a dry stretch in late June the probably took the top yields off this plot. The rest of the summer was very hot but rainfall, although sparse, did come at the right time. Standability at this late harvest was outstanding, with very little broken stalks below the ear with only a few root lodged. The overall rating of the plot is an 8 out of 10. (10=best)
