TEST COMMENTS:

We had a well-drained site and a good start after planting this spring. Stand counts were on par with other plots in June. We had wind damage on July 17 with 40 to 50 percent damage. The stalk height at harvest was around 7 feet and had a uniform look to the plot this fall. A few gooseneck stems were not significant enough to be a harvest issue. Some weed pressure early but at harvest, it was very clean. Variable grain moistures and cob lengths as some plots ran out of water and there were noticeably better yields on lower-lying plots. The early- and late- tests had to be rejected due to high variance.
