† See last page for Product/Brand, Technology and Type information. †† Milk/ton: calculated from Rock River data using Milk2006 Traditional 48 hour. Bold values significantly better than test average. ns = not significant

**TEST COMMENTS:** *Planting conditions were wet, and the seed slot did not close up until the first good rain. Emergence was still good and side wall compaction did not seem to be a problem. Rainfall for most of the summer was adequate, and temperatures were above average. Disease pressure was low, with some gray leaf spot and anthracnose. Overall rating of the plot is a 8 out of 10. (10=best)*
