TEST COMMENTS:

This plot struggled throughout the season. Soil conditions at planting were on the wet side, and then drought conditions occurred later in the season. Some weed pressure came in and was a challenge to control along with making harvest a challenge. Seed size varied from strip to strip. Plant height was 28 to 45 inches, and taller plants had wide spaces between pod sets. Weed pressure throughout the plot led to elevated variance (CV), but the test was highly significant for product ($p < 0.001$).
