TEST COMMENTS:

We had great planting conditions in May, and the plot was looking good all year. The lack of moisture in August and into harvest led to some variable soil moisture and the higher areas of the plot lost some yield as a result. Good weed control all year. The beans were almost 5 feet tall in some varieties. At harvest conditions were dry but head loss was minimal. Variable soybean yields have been common this year as dry conditions dominated the second half of the growing season.
