TEST COMMENTS:

Planted here in good soil conditions. Ed mentioned that subsoil moisture was good in early summer, although a hot and dry June made good use of that moisture. Rainfall fell at the right time, and crops looked great through most of August. However, hail that stripped 85% of foliage off the corn, and 90+ mph winds both came in late August. Lodging scores are from 0-100%. The full-season test yields seemed to be more affected by the wind and hail than the early-season test.
