### TEST COMMENTS:

*This dryland site near Wisner, NE was classified by the Nebraska drought monitor as being in an extreme drought (D4). In addition to this drought stress, a few weather events that did pass through brought severe wind. Some hybrids reacted to the wind by green snapping which reduced yield directly. Others goosenecked but were able to pollinate and form ears. The wind damage in combination with the dry soil profile reduced yields to levels much lower than typical for this site and region. From planting through black layer, this farm was 4.1" below the 10-yr average for seasonal rainfall.*
