TEST COMMENTS:

Weather conditions have been all over the place in this area this season. This site experienced a very wet early spring with small planting windows. It was planted in nice soil conditions with great emergence. The weather turned dry in June, then heavy rains came and oversaturated the soils, then went back into hot and dry weather. August brought hot temps and lots of storms, some having 60+ mph wind events back to back. This created some lodging issues here. Talking with Dave, he was happy that everything was very much harvestable and still yielded, though about 25 bu/ac below average for this area.
