TEST COMMENTS:

Princeville was planted in favorable soil conditions and stayed that way most of the planting season. Soon after, conditions turned very wet (and remained that way), with a few fluctuations in soil temperature. August and the first half of September turned very hot, which led to very fast dry down and the crop finishing early. This caused low test weights and lower yields than this area is used to seeing. Common foliar diseases were seen here as well, likely causing some of the lower yields. However, the plot was standing perfectly and was a very good representation of this area's growing season.
