PEST & DISEASE RISK:	Gray Leaf Spot, Fusarium, Pythium, Diplodia Ear Rot*

TEST COMMENTS:

This location started off looking good; it came up quickly after planting and had good emergence. Above-average rains in the second week of August caused some water issues and some variability within the reps. Some spots in the fields had a bit more water stress, which caused some yield loss and higher moisture at harvest. Moisture at harvest had a bit wider range, with some green left in some plots. Overall, the plot yielded well but was off from last year, with some tip back within plots. One replicate in the early-season test was dropped due to high yield variability.
