TEST COMMENTS:

This is a new irrigated site for us this year that is very uniform with good drainage. This is a corn-on-corn location that is well managed with good fertility. The site started off with great emergence and looked good all year, with above-average rains that helped with early-season growth. There was a good spread of moisture at harvest, with plots still standing well and very little seed disease present. These were good yields with uniform reps from a great site.
