HARVESTED - STAND:	Oct 28 33.4 /A
PEST & DISEASE RISK:	Fusarium, Diplodia Ear Rot*

TEST COMMENTS:

We have been using this site for a number of years and have always had good success here. The location has a very fertile sandy loam that can dry out but will produce well if adequate moisture is available during the season. The site harvested well with an even spread of moisture and produced good yields for the year, thanks in part to a great final population and lots of late-season rainfall. Some kernel disease was present at harvest, and the plot was still standing well, but stalk strength was getting weak.
