FERTILITY - Applied N:	
Applied N-P-K (units):	180-50-90
SEEDED - RATE - ROW:	May 13 32.4 /A 30" spacing
HARVESTED - STAND:	Oct 28 31.8 /A
PEST & DISEASE RISK:	Fusarium, Maize White Spot*

TEST COMMENTS:

Planted on May 13th in dry conditions, this location showed good emergence and uniform stands. Rainfall remained fairly consistent throughout the growing season, with a brief dry spell in July that appeared to have little impact on crop development. During harvest, mild tar spot, tip back, and broken stalk tops were observed across some hybrids. Overall, this was a great location and trial. Results from the early-season test were rejected because yield differences among varieties were not statistically significant.
